

iShared™ Mobiliti™

Data Protection and Access for Mobile and Branch Office Workers

Synchronize Data Anywhere on the WAN

What happens to important corporate data when it leaves the main office and ends up on the desk of mobile, home and branch office users? Without appropriate backup and synchronization with the data center, remote data becomes expensive, risky and non-compliant. iShared Mobiliti software delivers unparalleled access and protection for data traveling anywhere on the WAN. Road warriors stay productive en route and branch office workers keep in synch with the rest of the enterprise.

Data Protection and Backup for Laptops

Protect local data by enabling users to backup data files from their desktops and laptops to the network. Backups run automatically without user intervention and seamlessly synchronize changes to the destination on the network.

Data Continuity for Mobile Users

Enable mobile professionals to stay productive on the road by making important data available at all times. iShared Mobiliti delivers virtualized, offline cached access to selected network file servers without requiring any changes to mapped drives or folders.

WAN-optimized Transport

iShared Mobiliti provides centralized data management for branch office PCs and laptops without compromising WAN performance. Advanced compression and file differencing technologies enable fast synchronization and backup by ensuring that only the portions within a file that have changed are transmitted over the network. This creates up to a 99 percent reduction in data backup/synchronization time and bandwidth consumption!

Simple and Scalable Architecture

Silent install options and wizards make the product simple to deploy and use. Customization kits and centralized administration make it easy for system administrators to cater to the particular needs of enterprise rollouts. Automated operation means users don't need to manually synchronize or backup their data.

Centralized Deployment

Centrally script and standardize iShared Mobiliti installations, deploying to any number of desktops.

Easy laptop/branch office to data center synchronization

Protect local data without compromising mobile access

Offline cached access to network file servers

Automated deployment and operations

Microsoft® Gold certified

Key Features

WAN-optimized Transport

- End-to-end file compression
- Quick large file backup

File Differencing

- Block-level, byte-level and patented write monitor

Centralized Administration

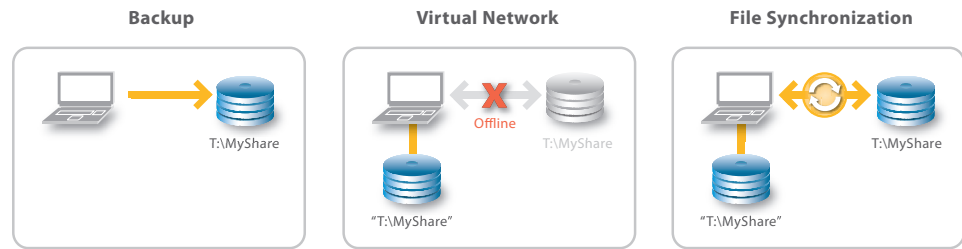

- Consolidated reporting
- Standardized user profiles

Robust Platform Support

- Client software for Windows® XP, 2003, 2000
- Support for TCP/IP, IPX/SPX and NETBEUI protocols

Secure Transport

- Data encryption in transit
- Three encryption methods to choose from

Synchronize and protect data anywhere across the WAN — on the road or at the branch office — with iShared Mobiliti software.

Virtual Network

A virtual network simulates the network structure of an enterprise onto user laptops, creating a virtual network view. All mapped drives, file server names, links and shortcuts are available even when disconnected from the network. File operations are unchanged from the user perspective and users can continue to work on network files as if online.

Backup

Fast, cost-effective file synchronization is accomplished through iDESP (Intelligent Delta Selection Process), which selects the most efficient of three delta synchronization technologies: block-level, byte-level and write monitor differencing. With iDESP, only the changes made to a file are transferred across the network in a compressed format.

File Synchronization

Automatically synchronize files with no user intervention or configuration. Synchronization can take place immediately upon detection of network availability.

Seamless Integration

Packeteer® iShared WAFS/WAN Optimization appliances enable a single iShared data center appliance to support both branch office devices as well as iShared Mobiliti clients for seamless performance.

System Requirements	iShared Mobiliti Server Software	iShared Mobiliti Client Software
Operating System	Microsoft Windows NT/2000 Server or Workstation/2003/2003 R2 (NT 4.0, Service Pack 3 or higher)	Microsoft Windows 2000/XP
Disk Space: Program	At least 9 MB required for installation	At least 16 MB required for installation
Disk Space: User Data	Additional disk space (100 MB or more) is recommended for temporary file storage	Additional disk space (typically 20 MB) is recommended for temporary file storage
Hardware	PC with 300 MHz or higher processor recommended	PC with 233 MHz or higher processor recommended
